DUAL GENERATORS AT ZANZIBAR SERENA INN ASSURE 24 HOUR UNINTERRUPTED POWER DURING ISLAND POWER OUTAGES

Recent reports have gone out regarding a lack of power supply on the Island of Zanzibar for the past three weeks.

Upon this occurrence, **Serena Hotels** with its tradition of high standards and commitment to total guest satisfaction immediately purchased a 2nd generator to supplement its existing back- up generator.

The new 200kw *Visa genset* generator, which comes with an in-built silencer to prevent noise pollution, has the ability to efficiently supply all of Zanzibar Serena Inn's electrical requirements including air conditioning, lighting, kitchen facilities and refrigeration, water flow, water heating and water purification.

The dual generators with a combined capacity of 500kw will therefore be operated in combination to deliver a 24 hour continuous power supply.

Zanzibar Serena Inn is not only managing this issue within the facility but is also in close dialogue with the authorities to monitor the restoration of regular municipal power facilities, which we anticipate will occur shortly.

We at Serena Hotels assure guests who will be staying at the **Zanzibar Serena Inn** that all facilities and service delivery continue to be as usual, with a continuous electricity supply around the clock.
