

NGOMA LODGE

GAME SIGHTINGS

Ngoma agent report, May 2026

May has been cool in the mornings and at night and generally warm in the daytime. Chobe flood plains have been stunning and that's gives a great value of the view from the lodge. It was such a great Month of with beautiful sightings throughout.

Another special sighting of the Month of May was with our resident cheetah by the name of Mavis who really surprised us with new family as she now got 3 lovely cubs and this has been a special rare sightings in the entire Chobe national park because it was not believed the park can hold cheetah because of the environment itself which is full of thick bush or vegetation as Cheetah are more common in the areas which are open for its hunting habits and also on their speed. We are proud of this as this cheetah has now adapted to our environment and is really a very good sign now that the cubs will easily adapt as they are born in this environment.
